BitsPlease will be building a Single Page Application Using Knockout.js. The application is going to be a Javascript Trivia game that will have a total of 10 questions. During the quiz the user will be allowed to go forwards and backwards. Once the quiz is submitted there will be a summary of the results.

Results requirements

- Rank (see rank criteria)
- Score (percentage based)
- Questions
- Answers
- Correct answers

Ranking Criteria

- Expert: 8-10 correct answers
- Novice: 6-8 correct answers
- Beginner: Less than 6 correct answers

Deliverables

- Custom HTML
- Custom CSS
- ViewModel's
- GitHub repository for hosting, tracking, and managing the development process.
 - Questions covered in WEB 230/231

ALAN EDWARDS

With more than 10 years of management, strategy, marketing and digital experience, Alan is a seasoned professional who has built a reputation for strong client cultivation and innovative thought leadership. He's dedicated to pursuing emerging technologies and developing products that not only meet the demands of the current market, but deliver on future trends. Alan's unique blend of experience has enabled him to form partnerships with some of the world's best-known brands and cutting-edge start-ups in a wide range of industries, including hospitality, entertainment, lifestyle, financial services, pharmaceutical, retail, CPG and action sports. Involved with the delivery of web platforms, mobile applications, and emerging technology initiatives from concept to final delivery.

Most recently, Alan has been involved in implementing and streamlining a Magento 2 checkout experience with a publicly-held, Seoul-based manufacturer of consumer electronics, appliances and mobile devices. The engagement will help them bring their offline portfolio of brands online.

GRISELDA BALMACEDA

Giselda is a self-starter with a passion for cutting edge technology. She delights in finding imaginative solutions for complex problems and moving ideas from good to great. Always striving to integrate creativity and marketing within her projects, Griselda delivers beautiful and robust web applications. She thrives when given the opportunity to strategically plan concepts from beginning to end. Leveraging her customer-oriented background, she combines an empathy for the consumer experience with her natural talent of creating unique and memorable user journeys. Versed in frameworks such as Angular, Bootstrap and Docker she has the foundational knowledge to implement robust solutions for her clients.

Griselda's professional ambitions are to create lasting, meaningful connections between brands and their audience. When not in front of the computer Griselda enjoys the outdoors and traveling to new places. Her wonderlust will be taking her to Iceland this upcoming summer where she plans to relax in the famous Blue Lagoon and take plenty of pictures of the Black Beach.

DONALD COUSAR

Don is a Software Solutions Architect with 20 years of Information Technology experience. Don has served as a Software Developer, Systems Engineer, and a Network Engineer for mid and large sized companies and is quite comfortable writing applications that handles millions of transactions. Don has led many large system migrations and each one of his previous roles.

Throughout his career, Don often works directly with engineering staff of major companies such as Google, Microsoft, VeriFone, and CA (Computer Associates), ultimately improving their products or integrating their products with other technologies. Don has built a reputation of taking on challenges that did not appear to have an out of the box solution, placing him in a position to develop solutions. Most recently, Don has been developing a Proof of Concept solution for centralized product management for Verizon Wireless stores. This solution would simplify managing and implementing in store marketing campaigns and price changes.
